OVERVIEW

EXECUTIVE SUMMARY

- [Redacted]
- [Redacted]
- [Redacted]

- The analysis reveals strong dominance of established technologies such as JavaScript, SQL, PostgreSQL, and AWS across both usage and industry demand.
- The job market (Number of Jobs per Skill chart) shows a high demand for languages like C, Java, and JavaScript, with C leading significantly in overall job availability.
- PostgreSQL and AWS remain the most widely used and in-demand database and cloud technologies, reinforcing their industry importance.
- The Average Annual Salary analysis shows the difference across languages. Swift, Python, C++, and JavaScript are the highest-paying, while SQL and PHP are on the lower end of the salary range. This implies there is a high pay for in modern, and high developing environments.
- Go and Redis show a strong growth in future interest.
- Respondents are mainly between the ages 25 and 34, with Bachelor's degrees being the most common qualification

INTRODUCTION

The purpose of this report is to analyse the survey responses and identify the different trends in respondent's technology preferences, career interests, and demographics. The report aims to visualise survey data into insights that can support informed decision-making.

The target audience for this analysis include: Technology professionals, Developers, Recruiters as well as Organizations seeking technology trend insights

By examining these trends in technology, career interests, and respondent characteristics, the report provides valuable data-driven insights that can support strategic decision-making. Furthermore, this analysis shows the gaps between current usage and future adoption, which in turn helps individuals or stakeholders understand the trends and anticipate future demands

METHODOLOGY

- Survey data containing responses on programming languages, Databases, Platforms, Web frame usage, preferences, education, and demographics, etc
- The data was collected through a survey completed by respondents from different countries, with different professional backgrounds.
- Data imported and consolidated into a structured format for analysis.
- Data was imported and cleaned using Microsoft Excel and Power Query to prepare it for analysis, improving accuracy and consistency
 - Standardized and transformed fields where necessary to support reporting, visualization, and analysis.

JOB POSTINGS

POPULAR LANGUAGES

PROGRAMMING LANGUAGE TRENDS

Current Year

Next Year

PROGRAMMING LANGUAGE TRENDS - FINDINGS & IMPLICATIONS

Findings

- JavaScript and SQL have the highest usage among respondents and remain highly in demand for future work.
- Many respondents indicated they have not worked with Go but would like to in the future.
- PowerShell is seen as the least used programming language in the Top 10, with an even lower number of respondents wanting to use the language in the future

Implications

- JavaScript & SQL continue to be key skills in the industry and will likely remain highly relevant in employment and professional development.
- Among respondents, Go has a strong adoption interest in the future, suggesting more employers may be adding it as a key skill for jobs
- Indicates limited growth expectations compared to other programming languages.

DATABASE TRENDS

Current Year

Next Year

DATABASE TRENDS - FINDINGS & IMPLICATIONS

Findings

- PostgreSQL is the used with and most desired Database among respondents.
- The number of respondents who want to work with MySQL & Microsoft SQL Server is approximately 25% lower than those who currently use it.
- Although Redis is not in the top 5 most currently used databases, it ranks in the top 2 for “Want to Work With” among respondents.

Implications

- This indicates it is not only highly preferred, but a trusted database
- This decline suggest respondents may be moving to alternative databases
- This suggests that although it has lower current usage, there is a growing interest for future adoption

DASHBOARD TAB 1: Current Technology Usage

Current Technology Usage

Top 10 Programming Languages Worked With

Top 10 Databases Worked With

Top 10 Platforms Worked With

Top 10 Webframes Worked With

- The most Databases currently include PostgreSQL, MySQL, and SQL Lite
- 10871 respondents current use Amazon Web Services (AWS) Platform
- 2916 Spring Boot is currently the least used Web frame among respondents, with Node.js in the lead with 9230 respondents

DASHBOARD TAB 2: Future Technology Trends

Future Technology Trend

Top 10 Programming Languages Wanted to Work With

Top 10 Database Wanted to Work With

Top 10 Platforms Wanted to Work With

Top 10 Webframe Wanted to Work With

- The top 3 Databases respondents want to work with are PostgreSQL, Redis, and SQLite
- 10 516 respondents are interested in working with AWS in the future
- Node.js is popular among the Web frames that respondents want to adopt

DASHBOARD TAB 3: Demographics

Demographics

Respondent distribution by Age

Age

- Prefer not to say
- 18-24 years old
- 25-34 years old
- 35-44 years old
- 45-54 years old
- 55-64 years old
- 65 years or older
- Under 18 years old

Respondent Count by Country

ResponseId (Coun...)

1 3441

Respondent distribution by Formal Education Level

Respondent Count by Age, classified by Education Level

DASHBOARD TAB 3: Demographics

- Respondents aged 25 – 34 make up 41.3% of the total number that participated in the survey
- The county with the highest number of respondents is the United States of America, leading with 3441. 1925 of those respondents hold a Bachelor's degree
- 8629 respondents hold a Bachelor's degree, making it the highest held educational level across the survey participants
- Respondents aged 24–34 have the highest number of Master's degree holders, while the 35–44 age group leads in the number of Professional degree holders.

DISCUSSION

- JavaScript and SQL remain the most widely used and in-demand programming languages, while Go shows strong future interest despite low current usage. PowerShell has the lowest usage and demand, indicating limited growth potential.
- PostgreSQL is the most preferred database overall, showing strong trust and industry relevance among respondents.
- MySQL and Microsoft SQL Server show a ~25% drop in future interest compared to current usage, suggesting a possible shift toward alternative databases.
- Redis, although not widely used currently, ranks among the top 2 in future interest, indicating strong potential for future adoption and growth.
- Overall, results show continued reliance on established technologies alongside emerging interest in newer, high-performance tools.

OVERALL FINDINGS & IMPLICATIONS

Findings

- Well known technologies such as JavaScript, SQL, PostgreSQL, and AWS dominate both current usage and future interest.
- Although the usage is currently low, emerging technologies like Go and Redis show strong future interest.
- PowerShell and some traditional tools show low usage and low future demand.
- The respondents are largely made up of early to mid-career professionals (25–34), influencing technology trends and preferences.

Implications

- These technologies remain critical industry skills and will continue to drive hiring and training priorities.
- This suggests a shift toward modern, scalable, and high-performance systems, indicating future growth in these technologies.
- These tools have limited expansion in broader software development roles.
- The survey reflects the priorities of younger professionals, who are shaping the demand for modern, in-demand technologies.

CONCLUSION

- The findings show us a clear gap between established technologies and emerging tools within tech industry
- Technologies such as C, Java, JavaScript, SQL, PostgreSQL, and AWS dominate both the current usage and job market demand, as reflected in the job distribution chart.
- The salary analysis shows us that modern languages often offer higher annual salary (e.g., Swift, Python, C++).
- At the same time, increasing interest in technologies like Go and Redis suggests a shift toward more modern, scalable, and high-performance systems.
- Overall, although established technologies remain high in demand, the industry is moving towards emerging and newer tools, and the salaries reflects this shift.
